

DevFest Challenge - GDG Algiers Loader (Easy)

We're tired of the message loading . . . when our users wait for an action to complete; because of that, our UI team has thought of something cool, but again... it's up to the developer to transform their imaginary creativity into reality, can you?

code the loading animation presented in ./Demo.mp4 using **ONLY HTML, CSS**

NB: Don't forget to add the challenge author to your repo and make it private.
